

Join us on our remarkable journey & mission to impact communities & increase positive health outcomes

At FBGEN, we embarked on an incredible leap of faith to establish a biotech organization driven by a calling—a calling to address the profound lack of representation in Science, Technology, Engineering, Math, and Medicine (STEMM) professions. This leap was taken despite the uncertainties that often accompany such ventures. The courage to step forward into the unknown, guided by our conviction, has led us to where we are today.

Our organization, a non-profit 501(c)(3), was founded with a vision to combat disparities and underrepresentation in STEMM fields. Our mission focuses on providing robust STEMM education, training, and outreach initiatives, with a particular emphasis on engaging marginalized and vulnerable communities. Genome-based research serves as our cornerstone, enabling us to facilitate improved diagnostics, effective medicine, and improved health outcomes.

We strive to ensure that every project we undertake moves beyond the laboratory to impact clinics and communities. Our commitment to research excellence and community engagement forms the bedrock of all our endeavors.

We believe that fostering education, encouraging dialogue, and advancing research in genomics can significantly contribute to addressing health disparities and creating opportunities in STEMM fields for those who have been historically marginalized.

However, we cannot do this alone. We seek your partnership, support, and generosity to continue and expand our initiatives. Your donation will directly contribute to our efforts in creating opportunities and improving health outcomes through education and research.

Your generous contribution will enable us to:

- Train and mentor STEMM students, educators, and counselors in genomic studies and career paths.
- Develop and evaluate training programs for socially and economically disadvantaged individuals.

- Coordinate projects aimed at improving outcomes through genomics.
- Support grants for gene-related advancements in testing, trials, and therapeutics.
- Organize discussions and town hall meetings on ethical considerations in genomic therapies.

- Pursue funding to expand our training and community engagement initiatives.
- Every donation, regardless of the amount, makes a tangible difference in our ability to empower biotech talent, drive innovation and create impactful health outcomes.
